Introduction

Being Human is a fashion brand by Mandhani Industries. The company was established under Being Human –The Salman Khan Foundation dedicated to the cause of providing education and healthcare to the underprivileged section of society. The motto of the company is philanthropic as all the proceeds from the clothing line are used to support the education and healthcare initiatives of the foundation (Bhasin, 2016). The brand has expanded to over 500 retail touch-points and has transformed itself to become one of the leaders in casualwear clothes. They are rapidly evolving, with a plan that will lead to stores all over the world. The objective is to solidify Being Human's position in the casualwear market (beinghumanclothing.com, 2022).

Figure 1.1 – Social media platform followers data for Being human & its competitors.

Being Human is present on all the platforms compare to its competitors. However, Max Fashion and United Colors Of Benetton have more followers and better reach on every single platform except for Twitter. Since both the companies are larger in scale and have been functioning for far more years compared to Being Human, the years of efforts in Digital and Social media marketing favours the competitors. In spite of that, Being Human has managed to attract and engage a lot of followers despite having fewer resources and time. One of the key strengths for Being Human

is their founder Salman Khan who is one of the biggest faces of Bollywood who manages to bring in a lot of consumers for the company and almost all of influencer marketing is done by him on his social platforms which makes it a huge competitive advantage for the company.

Industry Structure

A significant contributor to India's economy is its textile and apparel industry.

It provides numerous employment opportunities for millions of people and plays a vital role in India's export and relations (Invest India, 2022). This industry's contribution to the national GDP is approximately 2%, and it accounts for an additional 7% of the industry output. In 2020-21, the share of apparel, textile, and handicrafts in India's total exports was 11.4%, boasting a 4% share of the global trade in textiles and apparel, making it a strong player in the global industry (Statista, 2022).

Known for being one of the largest producers of cotton, jute, and silk in the world, India is the second-largest producer of silk globally, and around 95% of the world's hand-woven fabric comes from India, its technical textiles segment estimating at \$16 billion, which contributes to approximately 6% of the global market (Invest India, 2022). This industry is the second-largest employer in India as it provides direct employment to 45 million people and 100 million people (Statista, 2022).

Additionally, the COVID-19 pandemic resulted in a significant shift in the industry, and India became the second-largest manufacturer in the world for Personal Protective Equipment (Invest India, 2022). Now, more than 600 certified companies produce PPEs, with the global market worth predicted to rise, and be over \$92.5

billion by 2025, up from \$52.7 billion in 2019. This shift allowed for the industry to sustain during the pandemic and also allowed India to be a critical player in the global PPE market (Invest India, 2022).

The apparel market in India is expected to reach a size of \$250 billion by the year 2025, where the domestic industry would contribute to a predicted 12% of export (Statista, 2022). Earlier, the export of cotton textiles was \$17.2 billion, recording a growth of 54% and 67% through FY 2020-21 over FY 2021-22 and FY 2019-20, respectively. The market's largest and most prevalent segment is women's apparel, with a market volume of \$43.65 billion in 2023 (Statista, 2022).

Internal analysis of Being Human

Internal analysis of Being Human involves internal factors which affects the company as well as external factors which make them either a Strength, Weakness, Opportunity and Threat (SWOT). The SWOT analysis helps to increase awareness regarding the factors which decide business decisions or a business strategy (Shaw, 2021).

Strengths: Famous celebrity Founder and Brand Recognition

Salman Khan is one of the major Face of Bollywood which comes with quirks when they are the founder of the company. he has a total following of over 157 Million on the Top 3 social media platforms. This helps to bring in organic traffic and engagement on the Website and App of the company. Given his celebrity status a lot of his fans want to purchase the products of Being Human which provides a competitive advantage over our competitors who pay for celebrity endorsements. Salman Khan has worked with other Celebrities in the past to promote the brand. Given Salman's network mostly none of the celebrities charge for their service as the organisation is a non-profit. However, signed celebrities do in fact get paid their fees. Salman Khan's following on the top 3 social media platforms:

- Instagram: 61.2 Million followers
- Twitter: 51 Million followers
- Facebook: 45.1 Million followers (*the data was retrieved on 4/05/2023*)

Weaknesses: Counterfeiting

Counterfeiting is a worldwide problem which leads to stolen sales from authentic brands who have spent resources to earn a profit. This results in increase of competition and affects sales and market share of a company (Bmedia, 2020). The founder has publicly requested its consumers to not purchase counterfeit products or knock offs cause its cheaper as their brand tries to help the society instead of earning profit for themselves, however counterfeiting still functions largely in the current market online and retail both (Being Human Facebook, 2019).

Opportunities: Automating Brand Protection

Introducing an automating brand protection software from companies like Redpoint will help to prevent the online counterfeit market and since online retail fashion shopping apps are used the most the software can find thousands of counterfeit companies if the problem is severe. Investing in a good automating brand protection software can help recover stolen profits and sales and help Being Human to carry out their vision of helping others (Moyer, 2019).

Threats: Immense Competition

The fashion apparel industry is a highly competitive market, Since Being Human is a premium brand, the slightly high price points leads their consumers to purchase from their competitors (Shaw, 2021). Given that most consumers who are brand conscious and fans of the celebrity founder, it still doesn't compete with its competitors to the level the brand desires, this is because the competitors are mostly international conglomerates and have a better advantage when it comes to brand recognition and quality of clothes for the same segment (Momin, 2022).

TOWS Analysis

TOWS analysis is an adaptation of SWOT analysis that stands for Threats, Opportunities, Weaknesses, and Strengths (OXFORD COLLEGE OF MARKETING, 2018). A TOWS Analysis extends a SWOT Analysis by providing actionable relationships between the many aspects of your organisation and environment (Lucidity, 2023). The strategies are based on:

- Strengths/Opportunities
- Strengths/Threats
- Weaknesses/Opportunities
- Weaknesses/Threats

Internal factors External factors	Strengths (S) • <u>Famous Celebrity Founder and Brand recognition</u> • <u>Strong Brand Image</u>	Weakness (W) • <u>Counterfeiting</u> • <u>Price Point</u>
Opportunities (O) • <u>Automating Brand Protection</u> • <u>Hiring Young Freelance Designers</u>	S-O strategies • Having a famous celebrity founder leads to many fans copying his style and using automated brand protection software will lead to making the company's website the only place to purchase such those products • Use a strong brand name and celebrity influence to hire freelancers.	W-O strategies • With automated brand protection software, it will reduce the availability of counterfeit products online. • Hiring freelancers will be cheaper and the capital could be used to maintain profit margins while reducing the price points of products.
Threats (T) • <u>Immense Competition</u> • <u>Raw Material Cost</u>	S-T strategies • Using the fame of the celebrity founder networks to gain a competitive advantage. • Implementing a recycle programme to avoid wastage of raw material and increase the goodwill of the company.	W-T strategies • Legal actions should be taken against counterfeiters as they are a competitor as well and recover stolen sales. • Interrogating with suppliers and reaching an equilibrium

Figure 1.2 – TOWS Analysis for Being Human Clothing (Self, 2020)

Competitor analysis

	Max Fashion	United colors of Benetton (UCB)
Strengths	• Max Fashion is a huge company who have a lot of loyal consumers (Husain Zaidi, 2017). • They provide with a lot of variety of brands and their own in one roof which attracts consumers. • They have easy return policies which helps consumers if they are dissatisfied with their product (Husain Zaidi, 2017).	• Internationally accepted brand which creates a lot of trust and hype (Bhasin, 2017). • The quality of their fabric is very good and has earned the reputation of selling good quality clothes (Bhasin, 2017). • Have sponsored F1 and Volleyball events which indicates their massive cash flow (Team, 2020) • Their marketing campaigns are very strong (Bhasin, 2017).

Weaknesses	• Their sizing is flawed as they lack data towards the healthier target audience and often mismatch for the plus sizes (Singh, 2019). • They don't advertise as much or invest in digital marketing compared to its competitors (S, 2017).	• Their price points are unusually high for the segment and the middle class audience wouldn't purchase it repetitively (Bhasin, 2017). • They have many controversial ad campaigns in the past like 'UNHATE' which upset many religious and LGBTQ communities (Team, 2020).
Opportunities	• Exploring the untapped rural and urban population (Husain Zaidi, 2017).	• Since, Online retail has gained a lot of attraction, using the best out of the digital marketing and social media marketing sources with adding occasional discounts can help increase the sales of the company (Team, 2020) • Hiring Young designs can help the company to be up to date with trends and have a better idea of the Gen Z audience (Team, 2020). • Exploring the untapped markets gives better opportunities for expansion (Bhasin, 2017). • Investing in Bollywood celebrity endorsements as Bollywood is very famous in India and has a lot of fan following (Bhasin, 2017).
Threats	• Competition in the fashion industry is a threat to everyone and definitely makes it harder to survive in the market (Husain Zaidi, 2017).	• Competitors in similar segment for cheaper price points (Bhasin, 2017). • Increasing taxes and interest rates can lead to competitors reducing their prices and thus affecting UCB's profit margins (Bhasin, 2017).

Figure 1.3 – SWOT Analysis of Being Human's Competitors

Being Human survives on the foundation of Salman Khan's massive success and that led to its famous brand name and recognition. Being a non-profit organisation also helps the brand conscious community to invest in Being Human clothing as it is contributing towards the betterment of the society by providing healthcare and education to children of India who cannot afford it (beinghumanclothing.com, 2022). The premium clothing brand also benefits from the celebrity founders connections and income which has made the sign many celebrity brand ambassadors. However, surviving in the fashion apparel industry is no easy feat as the competitors are most multinational corporations with better networking opportunities and capital to invest with more resources to bulk order raw materials for wholesale rates. They also offer premium quality fabric for similar price points like United Colors of Benetton (Bhasin, 2017). This leads the competitors to have more market share in the Indian fashion industry and for more profit margins which threatens Being Human's business.

STEEPLE Analysis

STEEPLE targets towards inspecting the industry Being Human operates in and derives the external factors which may affect the company or the industry. The acronym stands for Social, Technological, Economical, Environmental, Political, Legal, Ethical (Lucidity, 2023).

	Name of the Factor	How much does the factor affect the Brand or the Industry
Social	Celebrity Influence	Low
Technological	Online Retail	High
Economical	Changing trends	Moderate
Environmental	Wastage of Raw materials	High
Political	Outsourcing to Asian Countries	Low
Legal	Government Diversity	High
Ethical	Animal Cruelty	Low

Figure 1.4 –External factors affecting the Brand or the Industry.

Social:

The music artists and film celebrities from the Bollywood scene has an impact on the fashion industry. The fashion business is one that is greatly influenced by societal trends. Musicians with a large enough fan base can influence the fashion sense of their audience. K-pop has recently made enough noise, and K-idol fashion sense is all the rage right now, with the apparel and outfit being the sign or brand icon linked with a specific person (Edrawmax, 2022). However, Being Human clothing and its target audience participate more in Bollywood entertainment compared to Korean pop culture and most consumers of Being Human purchase its products for being influenced by famous celebrity Salman Khan.

Technological:

Technological advancements have increased the marketing means of every industry and the Fashion/Apparel industry is no novice to this, a lot of marketing strategies including digital marketing, social media marketing and strategies have increased the sales of many brands. Similarly, Being Human have invested in their Online Retail platforms and have accumulated major sales from there. According to Chief Executive Officer (CEO) Sanjeev Rao, they have grown as a brand by 200% by partnering with a new digital (Bureau, 2023). Using Fashion Shopping apps and websites have made a record breaking sales in the year of 2022 for Being Human.

Economical:

Introduction of fast fashion brands have completely changed the product lifecycle of upcoming trends. Since fast fashion brands have consumed most of the market share the amount of clothes produced has increased more than before and since the trend have such a low product lifecycle all the clothes are wasted by dumping it into landfills (Shaw, 2020). However, Being Human could recycle these wasted materials as raw materials to decrease the costs of raw materials and decrease their expenditure to survive in the market and adding more CSR opportunities for the company.

Environmental:

As mentioned above about the clothes wastage increasing rapidly, Being human can recycle these raw materials and find an additional source for the betterment of the society. Recycling these materials will not only decrease pollution, it will also help to prevent unnecessary extraction of raw materials and help to preserve it for a longer run. An average American dumps around 80 pounds of clothes as wasted material every year and it has led to increasing the amount of clothe wastage, this has increased the clothes wastage by 60% in the last 15 years. (Shaw, 2020). It will not only increase the goodwill of the company but also give a competitive advantage to the company.

Political:

The Indian government has de-reserved most of the reservation rules and regulations for smaller textiles company and lets foreign investors to either invest in the existing companies in India or set up their own companies to secure their globalisation opportunities as India is one of the major textile industry (UKessays, 2018). This leads to more competition in the market and access to easy market share for foreign companies in the fashion industry which creates threats to Being Human to survive. However, given that their company objectives is to help better the society and provide healthcare and education to kids of India, it creates a large movement which makes people brand conscious and helps Being Human to become a main competitor in the Indian fashion clothing industry.

Legal:

Many companies face labour cost problems in their countries which leads to outsourcing from Asian countries for cheap labour costs (Shaw, 2020). However, Being Human being an Indian brand mostly benefits from Asian pricing of their labour and since India also provides with cheaper labour costs compared to western companies, it helps Being Human to manufacture their products in India and create more job opportunities for the economy. It also helps in securing their expenses for globalising means as they have a their finished products to ship out in countries where Being Human's stores are available.

Ethical:

Animal cruelty in business is gaining recognition as a threat to a company's social duty, a threat to the environment, and even a threat to revenues as customers become more aware of the problem. There are several alternatives to traditional animal treatments that provide potential economic prospects. Businesses should be aware of this trend and investigate innovative humane options to remain competitive in the market while also promoting environmental sustainability (Wang and Chan, 2017). Being human being a non-profit organisation doesn't indulge in animal cruelty and it works for the betterment of the society so the factor doesn't affect the brand compared to other companies in the industry.

SPACE Analysis

SPACE Analysis is used to evaluate a particular strategic plan. (Hooley *et al.*, 2017:83) to look at industry strength and relates this to a firms competitive advantage and financial strength (Canvas, 2020).

Company Dimensions	Industry Dimensions
<u>Financial Strengths</u>	<u>Environmental Stability</u>
Being Human Clothing doesn't have many financial data online but in the FY2017 they earned over 216 crores INR in revenue and a net profit of over 20 crores INR, this bring in a net profit ratio of 9.26% which comes near the average of 10 to 15% in the premium casual wear industry. With further improvements in the company, in the FY2022 Being Human made record breaking sales in the end of December and led to grow the brand by 200% (Prasad, 2018). Out of the revenue 8 to 10% of it goes to the Being Human Foundation which is approximately around 20 crores worth of charity donations, in addition to that all the profits are donated to the charity while showing consistent growth of business and sales. (Bureau, 2023)	The introduction to Online retail has led to many brands being more profitable and Being Human has used this to their advantage as well. The online retail industry has helped the technological means to purchase products from a few clicks away and it has increased sales for companies who have introduced it to their organisation. However, this has also increased competition and surviving in the market has become more difficult. MNCs who have better resources are able to get more orders online given the huge brand name and product quality reviews they are attached to which increases consumer loyalty. The global inflation has varied between 4.5% to 7.75 and may affect the companies to lowering their price points and have lesser profit margins (Fashinza, 2022). However the demand for the consumption of fashion apparel products have only been increasing and can be tackled by managing costs and pricing strategies.
<u>Competitive Advantage</u>	<u>Industry Strength</u>
Most of Being Human Clothing's consumers come from the loyal fans of Salman Khan who runs the non-profit, the competitive advantage of free celebrity endorsement as a brand owner helps in lesser marketing costs of the brand. Salman's networking has helped the brand to sign various celebrity endorsement deals for their jewellery and fashion segments. Being a non-profit organisation, all the profits are donated towards the underprivileged which helps people to make better decisions to help the betterment of the society. This lead to better brand	This industry contributes around 2% of the national GDP and accounts for an extra 7% of industry production. In 2020-21, the percentage of clothing, textiles, and handicrafts in India's overall exports was 11.4%, with a 4% share of worldwide textile and apparel trade, making India a significant participant in the global sector (Statista, 2022). The apparel market in India is expected to reach a size of \$250 billion by the year 2025, where the domestic industry would contribute to a predicted 12% of export. Earlier, the export of cotton textiles was \$17.2 billion,

recognition and more sales for the company while helping thousands of people (Business Today, 2018). Some of the endorsement deals include film celebrities like Amy Jackson and Jacqueline Fernandez.

recording a growth of 54% and 67% through FY 2020-21 over FY 2021-22 and FY 2019-20, respectively. The market's largest and most prevalent segment is women's apparel, with a market volume of \$43.65 billion in 2023 (Invest India, 2022).

Figure 1.5 – SPACE Analysis of Being Human clothing and the industry.

Space mapping

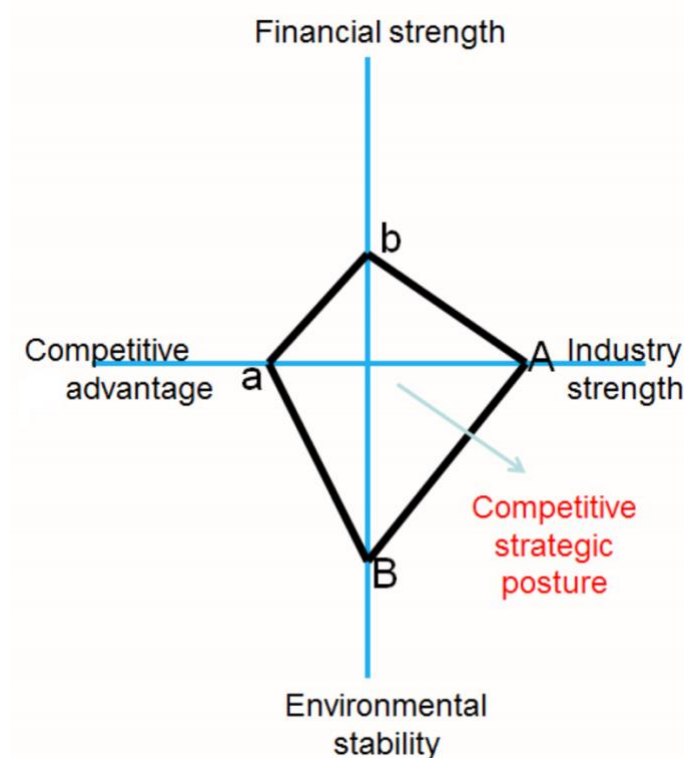

Figure 1.6 – SPACE Mapping (Canvas, 2022)

This figure indicates that the firm is in a somewhat poor situation, since fairly significant environmental instability is not offset by financial strength. In an appealing industry, the firm has a competitive edge (Canvas, 2022). This will help Being Human to get more opportunities to increase their sales by and increase their market share.

Ansoff matrix

The Ansoff Matrix, also known as the Product/Market Expansion Grid, is a two-by-two structure that management teams and analysts use to plan and analyse expansion projects (Peterdy, 2023).

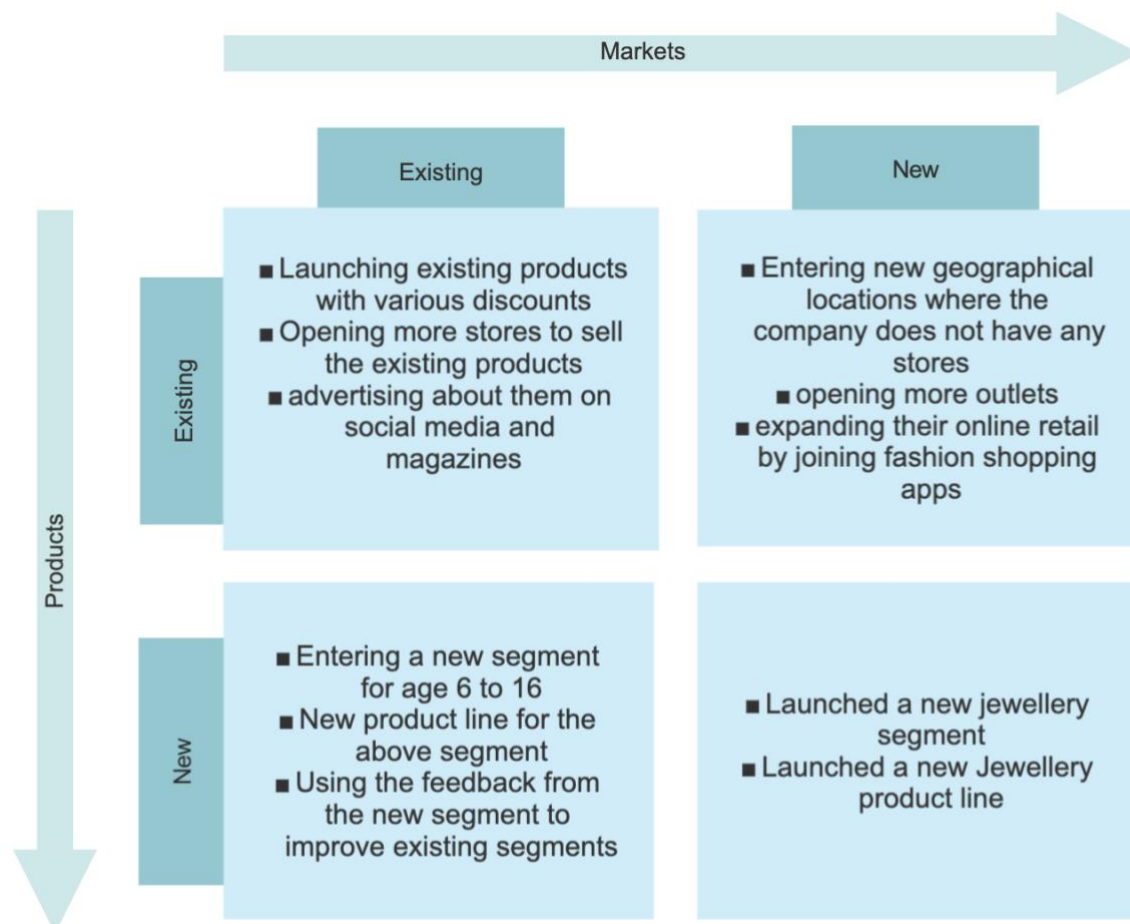

Figure 1.7 – Ansoff Matrix growth strategy for Being Human Clothing (self, 2020)

Each box represents to a specific growth strategy which are:

Market Penetration:

Launching the same products in the existing market can get difficult as the product might reach its maturity stage soon. However, using growth strategies can prolong the product lifecycle by selling the same products with seasonal discounts and new marketing campaigns (Khankasi, 2020). One of the strategies of Being Human is to keep opening outlets so that consumers can have easy access to purchase their products, this leads to selling the existing product at different places for faster trading (Khankasi, 2020).

Market Development:

In this section existing products are promoted in new markets by tapping into geographical locations which haven't been explored by the brand before. They also increase the number of outlets they have where the demand is more to increase their sales. They also join new markets such as online retail which creates another place to sell their clothes to the app or directly to the customers (Khankasi, 2020).

Product Development:

Promoting new products into the existing market helps to increase the variety in the company's product portfolio. It will also help Being Human to tap into a new target audience which will presumably increase sales. The product is launched with a lot of marketing campaign and as Being Human wants to expand their segmentation to kids and teens it will benefit them by investing in product development (Khankasi, 2020).

Diversification:

Being Human have diversified their products in the past by launching its own Jewellery segment which is an entirely a new product line to what their field of expertise is in and entered a completely new product, however it can be very risky but if done correctly it helps the business to survive on different markets (Khankasi, 2020).

Segment Attractiveness and Resource Strength Framework

This framework is designed to assess the attractiveness of a market segment before deciding which market to target (Creately, 2018).

Segmentation variable	Segment
Geographic Region, area, Temperature climate, population density	Region: India Area: Urban city Climate: Tropical Average Temperature: 24.46°C Population density: 464 per sq. km
Demographic Age, gender, education, work-status, socio- economic, SEC classification, family structure, religion, nationality	Age: 17 to 50 Gender: Male Family size: Joint family, Nuclear Family Education: Graduate, Post Graduate Work status: Home-Maker, Part-time employed, Full-time employed Socio-economic: Upper Middle class, Middle class Religion: All Nationality: All
Behavioural Attitude, loyalty, perceived benefits, users status, purchase and consumption pattern	Attitude: Good quality, Positive, Comfortable Loyalty: Experiments, Soft core loyal Perceived benefits: Quality, Value for money, Enhancements User status: First time users, Potential users Purchase and consumption pattern: Moderate
Psychographic lifestyle, AIO, interests, personality, VALS	Lifestyle: Fashionable, Comfortable, Designer clothes Personality: Online Shopping, Fashion Victims Activity: Work, Education Interests: Bollywood, Fashion, Opinions: Social media, Social issues VALS: Innovators, Early Adopters

Figure 1.8 – Segmentation table for Being Human

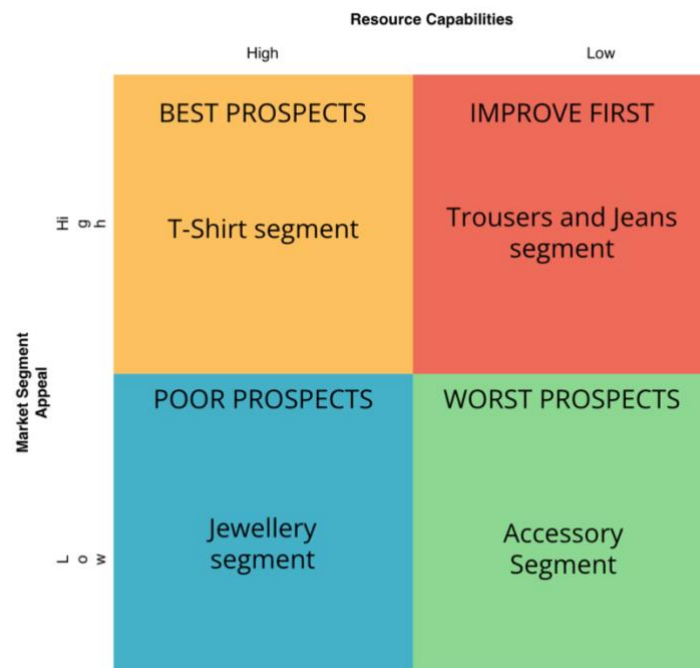

Figure 1.9 – Segment Attractiveness and Resource Strength Framework for Being Human.

The framework shows most of the product segments which the Being Human brand sells. However, the Accessory segment is to worst prospect for their brand as it barely contributes to the company's sales and it affects their resources. Jewellery segment is not their forte but it's an act of diversification and it's not doing great but however it is still surviving in the market. The Trouser and Jeans segment is doing pretty well but for the unusually high price points it doesn't not contribute as much as it should towards the company's sales. The main attraction of the brand is its T shirts and almost most of the sales are generated by this segment as it is much cheaper compared to the other segments (beinghumanclothing.com, 2022).

CSR & Green Marketing

Green marketing is a way to gain competitive power over a company's competitors. Businesses utilise their sustainability credentials as a unique selling point (USP) to correctly and honestly advertise their environmentally and socially responsible goods, practises, and brand values (Bureau, 2021).

7 P's of Marketing	Description
Product	• Being Human already uses eco-friendly materials like organic cotton. • Using recyclable packaging can help reduce plastic wastes and coverings over the product. (Bureau, 2021)
Price	• Appointing fair prices for its products as Being Human prices are higher than usual. • Offering discounts to consumers who donate clothes. This can be done by adding a donation box in every outlet. (Bureau, 2021)
Place	• Using Online retail platforms to minimise wastage of resources. • Using energy efficient electrical appliances like AC, Fridge and Lighting.
Promotion	• Using digital marketing tactics on social media platforms and email marketing to spread word. (Bureau, 2021) • Being transparent towards consumers and showing them the work behind the organization. • Using (SEO) Search Engine Optimisation to understand demographics and accumulate organic traffic (Bureau, 2021).
People	• Teaching the employees about sustainable practices and to avoid wastage of materials. • Ensuring the staff of the organisation is well kept and educated about Being Human's policy.
Process	• Using eco-friendly packaging for transport and shipping. • Avoiding unnecessary wastage of energy resources. (Bureau, 2021)
Physical Evidence	• Showing evidence of sustainable practices to the government and Being Human's consumers to increase awareness and Brand recognition. • Applying for government recognised certificates to be accepted as a Green organisation. (Bureau, 2021)

Figure 1.10 – Green Marketing Mix for the Industry and Being human

Being Human already has implemented several of these strategies to ensure they are a green company however some strategies like:

- Necessary certifications to approve as a Green Company
- Securing Energy consumption and avoiding unnecessary wastage
- Using energy efficient appliances
- Using SEO
- Fair price points

Are not there in the company. implementing this can lead brand conscious people to get attracted to the company while offering premium products while ensuring the environments safety.

Corporate Social Responsibility

Being Human is CSR based company as it is a non-profit and helps towards the betterment of the society. All the donations are proceeded towards the welfare of children's education and healthcare for underprivileged children. They are also partnered with different NGOs and provide sufficient funds to run schools and hospitals (Being Human, 2023). Being Human is the face of India's leading Non-profit organisation (NPO) and have made several strategies like employing all female stores and donating several charities to help the society as a whole.

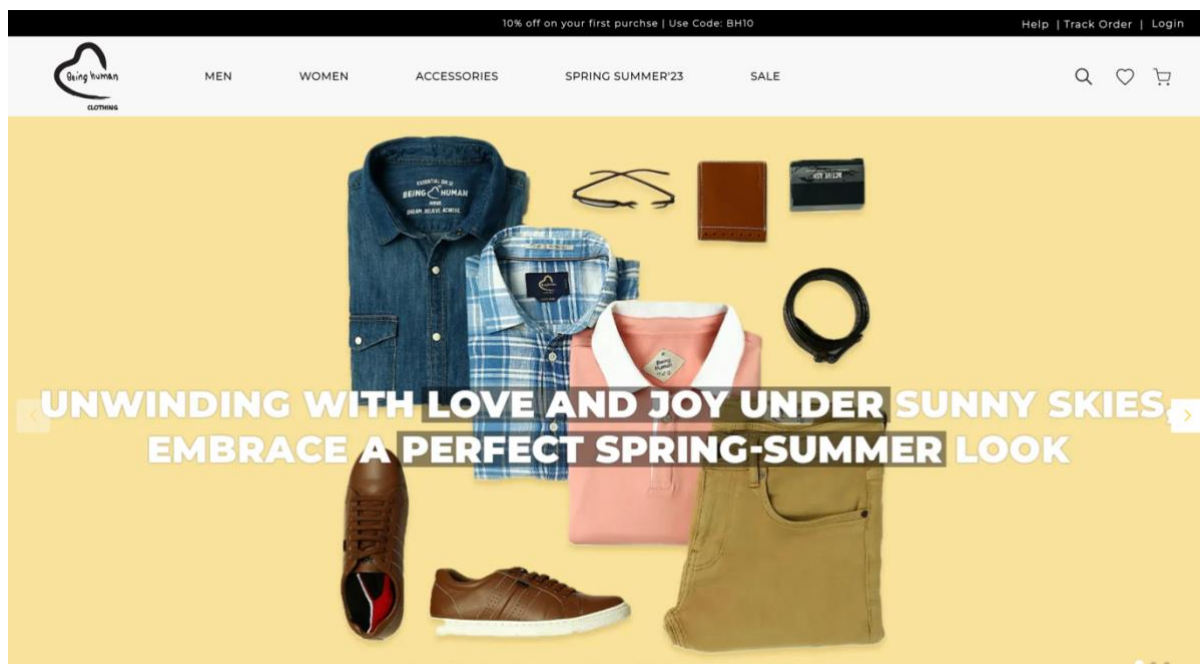

Website Comparative Analysis

According the Uber suggests the companies have organic traffic, keyword optimisation and backlinks which are as follows:

	Organic Keywords	Organic monthly traffic	Domain Authority	Backlinks
Max Fashion	1,486	17,568	34	187
Being Human	6,563	172,860	35	7,244
United Colors of Benetton	15,914	237,750	80	4,215,240

According to the stats collected from Ubersuggests its shows that Max fashion has the worst organic traffic and doesn't use keywords or get any backlinks which indicates their online presence is not optimum.

Being Human

Being Human Clothing's website has a basic and elegant design with a clean and minimalist design with a mostly white backdrop. The website has a clean and organised structure with easy-to-navigate sections, and it includes aesthetically attractive high-quality product photos. The website also has a basic colour palette that matches the brand's simplicity and sustainability concept. Overall, the aesthetics of the website are modern and elegant, with an emphasis on practicality and

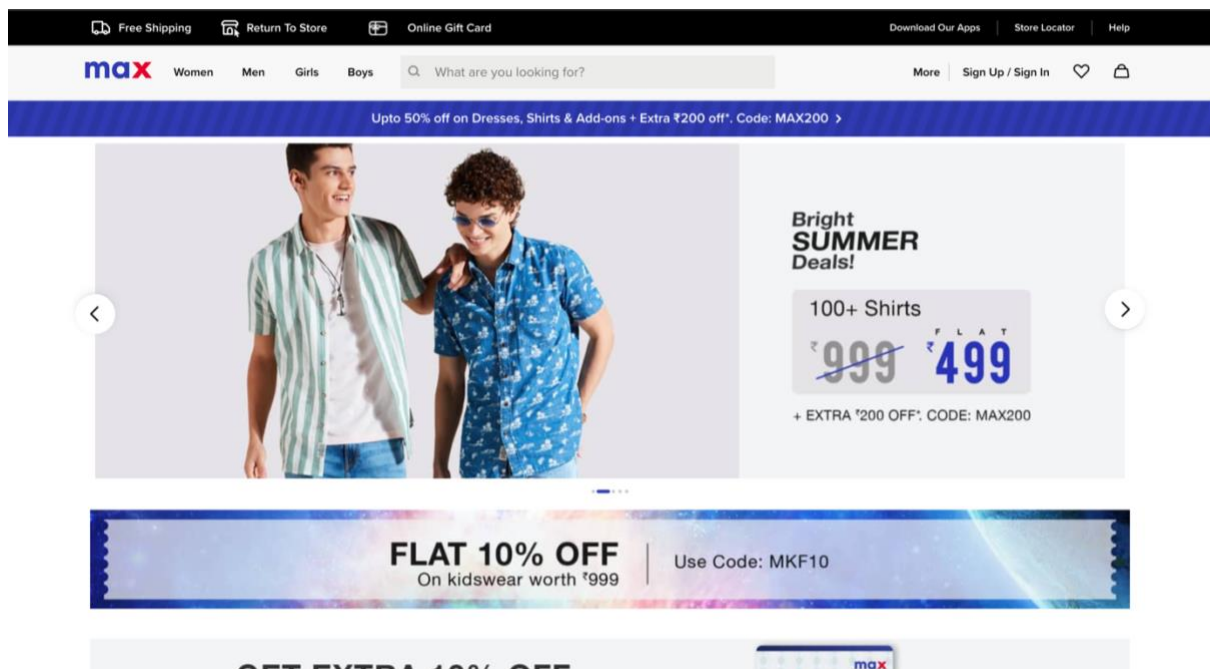

simplicity of use. The website has given a discount code on the top in black for the first purchase to make your first shopping experience memorable.

United Colors of Benetton

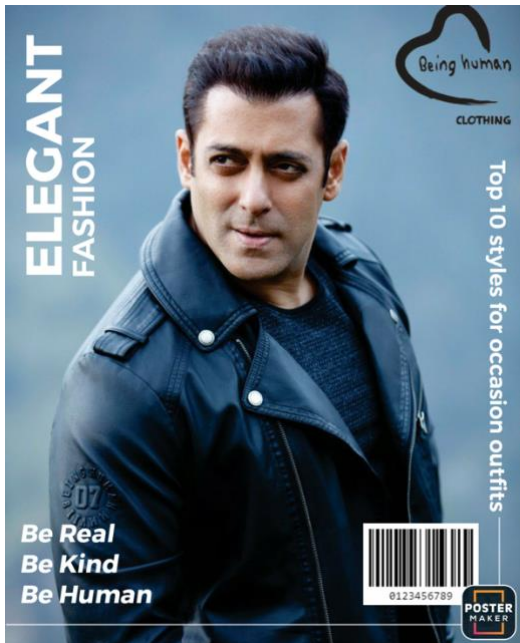

The website of United Colours of Benetton India is more vivid and colourful, reflecting the brand's emphasis on diversity and inclusiveness. The website offers a combination of photographs and videos that display the brand's products and social efforts, and it employs bright and vibrant colours that are aesthetically appealing and attention-grabbing. The website also boasts a clean and organised design with easy-to-navigate sections, as well as interactive aspects like a blog, social network feeds, and a newsletter subscription. The aesthetics of the website are lively and vibrant in general, with an emphasis on engaging the viewer and generating an emotional connection with the brand. Just like Being Human, UCB has used a discount code on the top to their new consumers.

Max Fashion

The website of Max Fashion India is bright and monochrome, reflecting the brand's focus on fashionable and inexpensive clothes. The colour palette of the website combines bright red and blue tones, giving it an energetic and young appearance. The website has a clean and organised style with easy-to-navigate sections, and it features high-quality product photos of the brand's most recent collections. Like UCB, the website contains interactive aspects such as a blog, social network feeds, and a reward programme that promotes consumer participation. Overall, the aesthetics of the website are colourful and engaging, with a focus on exhibiting the brand's newest fashion trends and inexpensive costs.

Media Kit

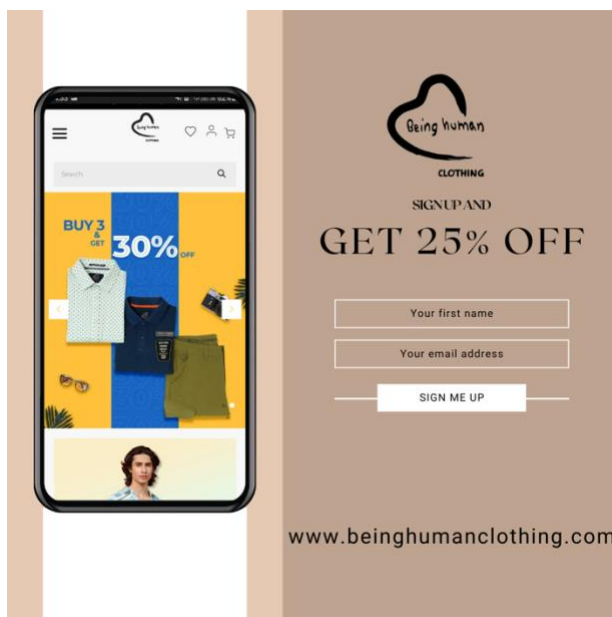

A magazine inspired post for Instagram stories/posts to provide them with occasion outfits as mentioned in the figure. A QR code is attached for users to directly scan it and reach the webpage of the blog with occasion outfits on the main Being Human Clothing website.

An Instagram story post for Instagram stories to notify consumers about the ongoing sale. When posting the story, using swipe up to shop link is provided by Instagram which will be exactly near the 'shop now' sign. This will lead to direct website jumps and increase organic traffic on the website and potential sales.

Introducing Giveaway posts can increase engagement and impressions on Instagram. These leads to people following us for updates, increases average likes on the platform, increases average comments and consumers sharing our posts to 3 more people who do the same which helps in user engagement.

Posting special discounts for limited period for signing up will help in increasing the websites organic traffic and sales. This will help to increase our traffic compared to our competitors.

Strategic Marketing and Digital Marketing options

Style guides:

Style guidelines might be given their own area on your website. Make certain that all of the products used in the guide have extensive descriptions. Posting this on our social media apps will redirect our target audience to our website where they will come across our products (Rosa, 2019). This will lead to a case of fashion victim and increase sales and brand recognition. The first post from the media kit is an example of this strategy

Influencer marketing:

Influencers with a huge following are typically well-known and respected for their opinions. They may significantly boost your sales by evaluating or suggesting your items (Rosa, 2019). Working with fashion bloggers and fashion reelers will help with brand advertisement on social media platforms and increase in website trafficking. It helps to advertise Being Human's products to a different group of potential consumers (Rosa, 2019).

Engaging with audience:

Engaging with the target audience is a simple yet effective strategy to increase the perception of the brand. Marketing campaigns which resonate with the target audience is the best way to increase engagement and interacting with them through social media posts and contests will lead to increase of Instagram impressions (Rosa, 2019).

Giveaways on Instagram:

On 27th Dec of every year, there is a 50% discount on the whole product line of Being Human as it is the founders birthday and usually around this time of the month people are active. Posting giveaways on 31st Dec will lead to maintaining the organic traffic on the website. The third figure in the media kit is an example of that. Not only will it increase followers but it will also increase in sales (Rosa, 2019).. Using this giveaway idea for their own electric bike segment will save costs with partnering up with other companies and will provide the audience with an amazing deal. The giveaway could be decided randomly who do all the three tasks mentioned in the

figure in the media kit, and mentioning it on their profile stories while wearing Being Human merchandise.

Discounts for signing up on the app:

For the first time consumers, to encouraging them offering a 25% discount on their first purchase will lead them to keep coming back for such promotional offers while increasing sales in the company. the last figure in the media kit supports that. This will also increase the traffic on the company and put the brand in a better standing while competing to Being Human's competitors.

REAN OBJECTIVES

REAN is an acronym for Reach, Engage, Activate, and Nurture. Each stage

corresponds to a distinct component of the customer journey and necessitates a unique set of ideas and tactics in order to effectively engage and retain consumers.

Here is the REAN model to support the company objectives (McDougall, 2014):

REACH:

- Optimising SEO (McDougall, 2014)
- Increasing brand awareness
- Social media strategy

All these factors will help to make an attempt to retain customer loyalty and have a bigger loyal customer base. (McDougall, 2014)

ENGAGE:

- Using Instagram analytics
- Increasing organic traffic through promotional campaigns
- Measuring the clicks and time spent on the website.

Using promotional tactics from the media kit will help Being human to retain consumers for longer on their website.

ACTIVATE:

- Signing up discount
- Promotional tactics
- Sale

This helps an engaged consumer to become a purchasing consumer (McDougall, 2014).

NURTURE:

- Email marketing (McDougall, 2014)
- Customer loyalty programme

Nurturing the consumer with incentives will increase customer retention and CRM tactics could be used to increase a loyal consumer base.

Conclusion

Being Human is already benefitting from using digital marketing strategies, however the digital marketing tools are advancing rapidly and keeping up to the trends is important. Using models like Competitor analysis, TOWS, Green marketing mix etc. helps the company to strengthen their weaknesses and come up with new strategies to become successful. The report analyses the difficulties faced in the fashion industry and how surviving in it is a difficult task, However given the right resources and tools it becomes easier to become a bigger company in the industry and that is only possible through the means of marketing.
